

# Fundamentals of Computing: Lecture 5

Piyush P Kurur

Office no: 224

Dept. of Comp. Sci. and Engg.

IIT Kanpur

August 5, 2009

# Summary of previous lecture

## Expressions

- ▶ Integer expressions.
- ▶ Floating point expressions `float` and `double`.
- ▶ Boolean expressions (or rather the lack of boolean expressions)

## Assignment

- ▶ Assignment is also an expression
- ▶ Special assignments like `i++` and `m *= 4`
- ▶ Problem with `==` and `=`.

# Statement

## Simple statement

A simple statement is just an expression followed by ; (semicolon).

eg

```
x = 100;
```

# Statement

## Simple statement

A simple statement is just an expression followed by ; (semicolon).

eg

```
x = 100; f(x);
```

# Statement

## Simple statement

A simple statement is just an expression followed by ; (semicolon).

eg

```
x = 100; f(x);
```

## Compound statement

A sequence of statements enclosed in a pair of braces eg

```
{  
    foo = x;  
    bar = y;  
}
```

# Control flow statements

Normally statements are executed in the sequence in which they are given.

What if we want to change ?

- ▶ Conditional statements
- ▶ Loop statements.

## Conditional statement

```
if ( expression ) statement  
if ( expression ) statement1 else statement2
```

## Conditional statement

```
if ( expression ) statement  
if ( expression ) statement1 else statement2
```

eg

```
if ( x > 42 ) {  
    printf("Value too large");  
}  
else {  
    printf("just right")  
}
```

# While loop

```
while( expression ) statement
```

## While loop

```
while( expression ) statement
```

Example summing numbers till n

```
sum = 0;  
i = 0;  
while( i < n )  
{  
    sum += i;  
    i++;  
}  
printf("sum till %d is %d",n,sum);
```

## For loop

```
for( initialisation ; condition; update) statement
```

eg

```
for(int i = 0; i <= n; i++)
{
    sum +=i;
}
printf("Sum till %d is %d",n,sum);
```

## For loop

```
for( initialisation ; condition; update) statement
```

eg

```
for(int i = 0; i <= n; i++)
{
    sum +=i;
}
printf("Sum till %d is %d",n,sum);
```

```
for(int i = 0; i <= n; i++) sum +=i;
printf("Sum till %d is %d",n,sum);
```
