globe SCIENTIFIC INC.

Globe Scientific is an ISO 9001:2015 certified worldwide supplier of laboratory plasticware, glassware and benchtop equipment.

Founded in 1983 by the Diamond Family, Globe Scientific was built on a foundation of quality, honesty, integrity and hard-work. Today, we are well known and respected throughout the industry for our high quality, innovative products and exceptional customer support. We remain family owned and operated, and are proud to be certified as a Women-Owned business.

From our humble beginnings in the basement of my parents' home (see History) to our current 150,000 sq ft. headquarters in Mahwah, New Jersey, it's been an incredible journey.

In 1983, my parents Milton and Beverly Diamond took a chance on an idea: to become a source in the industry for alternate disposables. At that time in his professional career, my father specialized in the Clinical Chemistry and Blood Analyzer markets. His expertise led Globe Scientific to become one of the first companies to supply alternate cuvettes and sample cups for blood and chemistry analyzers, a specialty that required precise molds and exceptional products at the best prices. Together, my parents poured their heart and soul into the company and were determined to make their mark in the industry. Their goal was simple: to provide customers with high quality, well-priced alternate products and first class customer service from a company that values honesty and integrity. And when they were ultimately able to hire employees, they wanted to provide a place to work where you were treated like family. These were the special ingredients that, combined, became a great recipe... and the foundation for our future success.

GDP-HiFi DNA Polymerase

Description GDP-HiFi is a new recombinant enzyme with genetic modification for its amino acid sequence, which results 70 times better fidelity thanTaq DNA polymerase and an extremely fast elongation rate (as fast as 15 seconds per kilo base, kb). GDP-HiFi has higher stability at high temperature, and this property makes GDP-HiFi perform very well for GC-rich PCR. Being highly thermo-stable, GDP-HiFi DNA Polymerase can remain viable even after being subjected to boiling for 2 minutes. This special enzyme has been modified genetically and needs less concentration of magnesium than other polymerases. The suggestion for magnesium ion in the reaction is 0.8 to 1.2 mM. 10X GDP-HiFi PCR buffer contains no magnesium. A tube of 25 mM MgSO4 is provided.

RiboIN™ RNase Inhibitor

Description RiboIN™ RNase Inhibitor is a protein which specifically inhibits ribonucleases. It is used in applications such as in vitro translation, cDNA synthesis, RNA in vitro synthesis, RNA purifications, etc. RNase inhibitor is easier to use and eliminate than the vanadyl ribonucleosides. It has a high binding affinity for pancreatic-type ribonucleases such as RNase A.
RiboIN™ RNase Inhibitor inhibits a broad range of RNases, including RNase A, RNase B, RNase C, but it is not effective against RNase 1, RNase T1, S1 Nuclease, RNase H.

Quality Control :
One Unit Definition : One unit is the amount of protein required to inhibit the activity of 5 ng of RNase A by 50%.
Purity : RiboIN™ RNase Inhibitor has been experimented in 12.5% SDS-PAGE electrophoresis. It's greater than 90% in purity. The specific activity is >80,000 units/mg.
Store at -20°C

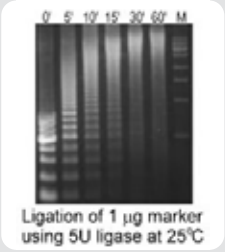
T4 DNA ligase



Ligation of 1 µg marker using 5U ligase at 25°C

Description : T4 DNA Ligase catalyzes the formation of a phosphodiester bond between 5'- phosphate and 3'-hydroxyl ends in double strand DNA or RNA with blunt or cohesive-end termini.
Applications : Joining doublestranded DNA with cohesive or blunt termini and 3'T-A overhangs. Storage
Buffer : 20mM Tris-HCl (pH 7.5), 1mM DTT, 50mM KCl, 0.1mM EDTA and 50% glycerol
10X Ligation Buffer : Contain with Tris-HCl, MgCl , DTT, ATP 2
Additional information : If the reaction is blunt end or T-A ligation must have more units of T4 DNA ligase. T4 DNA ligase is strongly inhibited by NaCl or KCl if the concentration exceeds 200mM.

AMV Reverse Transcriptase

A DNA polymerase which catalyzes the polymerization of DNA, using DNA,
RNA or DNA : RNA hybrids and templates. Besides possessing 5'-3' DNA polymerase activity, the enzyme also possesses some RNase H activity, which breaks apart RNA : DNA hybrids. It is used primarily for the synthesis of first and second strand cDNA and primer extensions. To a lesser extent, it is used for RNA sequencing and the preparation of probes for hybridization.

M-MLV Reverse Transcriptase (RT)

M-MLV Reverse Transcriptase (RT) is a genetically modified MMLV RT. It differs from the M-MLV RT by its structure and catalytic properties. The enzyme possesses an RNA-dependent and DNAdependent polymerase activity and a ribonuclease H activity specific to RNA in RNA-DNA hybrids. M-MLV Reverse Transcriptase has significantly lower RNase H activity than Avian Myeloblastosis Virus (AMV) reverse transcriptase.

Plant Protein Extraction Kit

The Plant Protein Extraction Kit provides rapid recovery (as few as 20 minutes) of soluble proteins from plant tissue samples. The final protein extract is compatible with many downstream applications, including SDS-PAGE, 2-D gel electrophoresis, Western blotting, activity assays and affinity purification.
The Kit includes three components :
an organic solution to lyse plant cells, an aqueous buffer to gently solubilize proteins and a proteinstabilizing reagent. The Kit has been tested on leaves, roots, flowers and seeds from various species, including Arabidopsis, tobacco, spinach, peas and soybeans. Extremely fibrous tissue samples, such as woody stems, may require additional mechanical grinding by devices not included in the kit.

Optimal pH

pH Too High

Figure 2. A pH indicator is premixed with the binding buffer to ensure optimal pH, facilitate DNA binding and allow for easy observation of undissolved agarose gel. If pH exceeds the optimal level (>7.5), the color of the solution will appear purple instead of yellow. 3M Sodium Acetate (pH5.0), which is included with the kit, can then be added to the solution to adjust pH and return the color to yellow.

BIO BASIC
Quality-Affordable Research

Bio Basic Inc. is a life science research-support company founded in Toronto, Canada - Headquartered in Markham, Ontario, Canada and Amherst, New York, United States. As of 2016, our offices are now also located in UK and Singapore.

Our mission here at Bio Basic is to challenge this belief that research is expensive and aim to show that research can indeed be made affordable - especially quality research. Therefore our goal is to minimize the cost of research projects as to allow a lab of any size, even one with a shoe-string budget to be able to conduct large credible research projects.

The advancement of scientific research involves a long and arduous journey through many stages. We believe that by supporting the initial stage of scientific research, otherwise known as “basic research”, creates an essential foundation for the success of the whole process. Basic scientific research suffers the most when the costs of scientific goods and services rise and that is why it is our mission to be facilitators of basic scientific research. Supporting basic research now enables the success of applied research in the future.

We manufacture the majority of our products in-house, thereby allowing us to substantially reduce our pricing.

We are transparent in our pricing to allow comparison with any other provider.

We can match or beat any competitor quotations whenever possible.

We ensure stringent QC procedures are employed to allow our products and services to be on par with the premium products and services available in the market.

MOLEKULA

OUR STORY

Molekula is a manufacturer and distributor of Fine Chemicals and Biochemicals in Bulk and Research quantities

Molekula was founded in 1999 operating from a rented facility in Lyon supplying both bulk chemicals and fine chemicals to customers in France. Founded in 2000 in France and the UK to initially support the Chemical Industry in Europe, Molekula has since expanded with operations across the globe. Stock and distribution warehouses in UK (Darlington), USA (Irvine, CA) and China (Shanghai) facilitate this worldwide distribution network.

During this period Molekula started to hold inventory and package products into smaller units for resale to the Research market. The first catalogue listing of 500 products in research units was distributed in 2001.

To better service the German and Continental European markets, Molekula GmbH was established in 2002 with office and warehousing facilities.

Vigorous sales expansion driven by customer demand has led Molekula to establish partners in many European and Middle East countries, while joint ventures in the Far East are enabling us both to increase our production capacity and further expand our product range.

Sales and Operations expanded in 2012 with the opening of Molekula Shanghai. Our Sourcing, Warehousing and Sales Team are now promoting the brand in the Far Eastern markets.

2013 was the start of our American office based out of Irvine, California, Breaking into the American market sparked huge growth for us, causing us to outgrow our UK headquarters.

In late 2014 we started the expansion of our UK Headquarters, making the move from Dorset to Newcastle-Upon-Tyne. Our new location provides us 8 times more storage space to stock products.

January 2016 saw the launch of our new website, starting what's predicted to be our most prosperous year ever on a high note. Our new site makes browsing and purchasing our products effortless for new and existing customers alike.

Since 1999 both our business and the industry has changed significantly, with Molekula evolving from a small start-up to an industry leader.

Fitzgerald Industries International was founded in 1989. From its humble beginnings of just six employees based in Concord, MA, the company has grown dramatically over the years, with offices and large workforces now spanning three continents.

Fitzgerald is a manufacturer and supplier of primary antibodies, secondary antibodies, recombinant and native proteins, ELISA kits, Serum and Plasma, and many other biological reagents. Our motto 'Bringing Life to Science' illustrates our personal approach to addressing the individual needs, interests and expertise of our customers. We believe that our outstanding customer service and excellent quality products at competitive prices are key to our success.

Our product range is constantly growing with the addition of new primary antibodies, secondary antibodies, recombinant and native proteins, ELISA kits, Sera and Plasma, and many other biological reagents. We strive to offer our customers the best products in the world, such that we go to the ends of the earth to make or source them! We manufacture many of our products in our facilities in Ireland, Canada and USA. And when we cannot make them, we work with institutes, academic laboratories, and manufacturing partners to ensure we can provide the biggest level of choice possible.

Customers around the world depend on our products for projects including Lateral Flow, ELISA (Enzyme-Linked Immunosorbent Assays), RIA (Radioimmunoassay), Immunoblotting, Immunohistochemistry and Flow Cytometry.

We sell only the highest-quality antigens, antibodies and other products, so you can rest assured your own products and/or research are based on dependable source materials.

Our customers know that if they need an antigen, antibody, or other product "yesterday," Fitzgerald Industries has what it takes to get them what they need.
