STUDENT ACTIVITIES

The previous year had been a very active and fruitful one for our Institute. IIT Kanpur has always striven to encourage an equitable balance between academics and extracurricular engagements. Our aim is to create future leaders in their chosen fields and not just technically accomplished individuals. Knowledge and skills that are easily measured or assessed are not the only ones worth having; some very precious qualities such as a person's sense of values and cultural awareness are equally important goals to attain. We take pride in the support the Institute provides to various social, cultural and sporting activities pursued by the Students' Gymkhana and other student groups. The activities range from clubs like **Prayas**, where students teach children coming from socially disadvantaged and economically deprived backgrounds to the **Dramatics club** which through its thematic and socially relevant plays often alert us to the most crucial questions concerning humanity, thus providing a corrective to our traditional knowledge-based and examination-driven teaching. Other technically oriented student groups are engaged round the year in pursuing special interests like robotics, electronic aids, animation, aero-modeling and astronomy to name just a few.

The overriding objective of our large-scale events like the Cultural Festival **Antaragni**, the Science and Technology Festival **Techkriti**, the sports Festivals **Udgosh and Josh**, the entrepreneurial event **Megabucks** and the film festival **Umang** organized by the Students Films Society is to infuse in our students a sense of richness and purpose. We are fully convinced that extracurricular activities and community services play a significant role in school life contributing to the development of the student into a whole person. The Gymkhana Festivals have seen vastly improved participation levels, both from within the Institute and also from

students from other Indian and international institutes. The revenue generated from the conduct of these well-organized festivals witnessed a dramatic growth this year and ably testifies to the managerial and logistical skills of our students.

Students' strenuous efforts often involving months of intensive training were well rewarded at the **Inter IIT Sports meet held at IIT Madras**. In our contingent of 120 there were over 40 first year students whose enthusiasm and experience, we hope, would provide a source of strength in the coming year. Other activities like nature trails, trekking, and mountaineering are being taken up actively by the students. Student's interest in activities like photography and music are also being actively encouraged and the Institute is doing all it can to provide the enthusiasts of these and other clubs with the requisite funding and equipment. In order to encourage the sports activities among the students, the Institute has introduced Sports Prizes to the medalists in the Inter IIT Sports meet, and twenty sports scholarships of Rs 500/- per month each for achieving outstanding leadership in sports.

Both the general interest student Magazine Meander and the campus news reportage of Spark are sustaining discussion and debate in the student community. These journalistic endeavors have been successful in cultivating a broader awareness in the student community of certain problems. They facilitate an active personal engagement in the system of redressal and also act as a sounding board for student opinion.

The placement scenario this year has witnessed a positive upswing with almost 93% of the B.Tech and 70% of the M. Tech students registered with the student placement office getting offers. A remarkable improvement in M. Tech placement has been observed with more than 100 additional offers compared to the previous years. Placement of the MBA students has been 100 % with substantial increase in the average pay package. Many companies of repute also registered for the on-campus-recruitment program for the first time. From the next academic session, the placement activities will start after the inter IIT Sports meet in December. A new complex comprising Students' Placement Office, Alumni Activities, and a mini convention centre is coming up adjacent to the stadium between Visitors' Hostel and SAC with enthusiastic support from alumni of 1969 and 1980 batch. With improved facilities and a response system in place, we earnestly hope that the coming year would see increased participation of companies and industrial organizations for effective placement and industrial training programs.

EDUCATIONAL GOALS

The engineering education should produce trained manpower for maintaining and advancing technological growth. The scope of engineering education should evolve based on the evaluation of technological growth for their usefulness and relevance to the prosperity of the country. The educational strategy should help to develop a knowledge industry. The systems involved in this endeavor should strive for furtherance of knowledge.

The academic goals of the Indian Institute of Technology Kanpur from the viewpoint of its teaching programme are as the following:

To prepare the students for the highest level of excellence in science, and technology and produce competent, creative and imaginative scientists and engineers.

To promote a spirit of free and objective inquiry in different fields amongst the students and motivate them for higher studies and research.

To foster inter-disciplinary approach. To promote the concept of virtual research departments by bringing together faculty and students into activities of mutual interest.

TEACHING PROGRAMMES

The Institute offers instructions in various disciplines of science and engineering, both at undergraduate (UG) and postgraduate (PG) levels. These programmes are planned and implemented by the Senate of the Institute through the Senate Undergraduate Committee (SUGC) and the Senate Post-graduate Committee (SPGC), respectively.

Undergraduate Programme

The four-year undergraduate programme consists of two parts having duration of four semesters each. The first part is the core programme common to all students, and is carefully planned to give the students a strong base of basic education in mathematics, physics, chemistry, engineering sciences, technical arts, humanities and

social sciences. The second part of the undergraduate programme consists of the professional courses and a project in the chosen branch of specialization. At the Bachelor's level, we have B.Tech. programs in Aerospace, Chemical, Civil, Computer Science, Electrical, Metallurgy and Mechanical Engineering. We also have integrated M.Sc. programs in Physics, Chemistry, Mathematics and Statistics. From July 2005, we have started an integrated M.Sc. program in Economics. The students for these programs are selected through JEE and usually they are the top students from various places in the country.

Two-Year M.Sc. Programme

There are programs for M. Sc. (2 years) in Physics, Chemistry, Mathematics and Statistics, where the students with B.Sc. (Hons.) background are chosen through an all-India examination known as JAM.

Postgraduate Programme

The postgraduate programme is intended to prepare students to enter their professions with a perspective and breadth of knowledge related to the principal divisions of their respective fields of specialization through courses and specialized research experience. A postgraduate student is typically enrolled for three or four courses each semester until the student advances to a point where the principal requirements of the programme left to be fulfilled are research and thesis.

M.Tech. Programme

We have **M.Tech. Programmes** in all the Engineering Branches, mentioned above. In addition, there are M. Tech. Programs in the interdisciplinary areas, such as, Nuclear Engineering, Biological Sciences and Bioengineering, Laser Technology, Environmental Engineering, Materials Science, and Industrial and Management Engineering. The M. Tech. Students are chosen through an all-India examination, known as GATE. We have also adopted a dual degree (B.Tech.-M. Tech.) program. In this program, the students admitted through JEE, are expected to complete the M. Tech. Program in five years. At the end of five years, the student is awarded both B.Tech. and M.Tech. Degrees.

MBA and MDES Programme

Recently, we have introduced two interdisciplinary programs, namely, for MBA and Master of Design. For these courses as well, the students are selected through the all-India examinations known as JMET and CEED respectively.

Doctor of Philosophy (Ph.D.)

The academic programmes leading to the Degree of Doctor of Philosophy (Ph.D.) exists in all the engineering departments and two interdisciplinary programmes, namely, Materials Science and Nuclear Engineering & Technology. The Ph.D. programmes also exist in Chemistry, Mathematics, Physics, Statistics, Economics, English, Philosophy, Psychology and Sociology.

The Ph.D. programme culminates in research on a selected topic leading to a thesis submitted in partial fulfillment of the requirements for the degree.

The Department of Physics offers a M.Sc.-Ph.D. dual degree program, which allows their M.Sc. students to continue for a Ph.D.

The M. Tech. and Ph.D. students receive research/ teaching assistantships.

D.I.I.T. Programme

The Institute started a D.IIT programme in Video Communications Systems with effect from first semester 1992-93. The duration of the Course is one year. The DIIT Programme is based on existing PG Course for M.Tech. Programme. This programme is monitored by the Department of Electrical Engineering.

New Initiatives

(a) M.Sc. in Economics

IIT Kanpur has introduced a M Sc (5 year integrated) program in Economics from July 2005. This program will provide a strong grounding in basic sciences, engineering as well as in various emerging areas of Economics.

The role of humanities and social sciences in Science Education is to be revisited. A perfect blend of humanities would imbibe intellectual honesty, professional ethics and capacity for teamwork in the face of new challenges. The knowledge of Economics and use of Technology for creation of wealth are necessary preconditions for breaking the chains of poverty and low standard of living in the developing countries. Economics and Technology have always migrated together from one country to another, from Europe to United States, from United States to Japan and from Japan to Asian Tigers. Today India is in the midst of this tremendous migration of global know-how. American and European companies are increasingly carrying out their design and manufacturing work in India.

India has a great tradition in Economics Education and Research. Prof. Amartya Sen, Prof. Jagdish N. Bhagwati are among the finest and best known Economists in the World.

Today's India needs trained mind that is a perfect blend of Technology and Economics. The Integrated MSc program in Economics is a step in that direction.

The programme has been designed keeping the recommendations of the Senate Undergraduate Review Committee in perspective. Twenty-five students will be admitted through the Joint Entrance Examination and there will be no prerequisite of Economics as a subject at the higher secondary level. The four streams of Economics are focused. They are Econometrics and quantitative techniques; Industrial economics and business policy; Development infrastructure and public policy and Environment and resource economics. The credit requirement for the graduation is 199 Credit Points. First four semesters would be common with the other branches of BTech and MSc Integrated programmes.

(b) Environmental Science and Environmental Engineering

The Scope of Environmental Science and Environmental Engineering is inherently interdisciplinary and expanding rapidly. Recognizing the challenges for environmentally sustainable development, IIT Kanpur initiated an interdisciplinary M.Tech. Programme in Environmental Engineering and Management in 1997. This experience has convinced the Institute that there is a pressing need to integrate environmental engineering and science across various disciplines to solve problems that have important societal impact.

A National Advisory Committee (NAC) was constituted by IIT Kanpur to identify the strategies related to the education in Environmental Sciences and Environmental Engineering. The NAC further recommended that in order to ensure full and unrestricted growth of environmental science and engineering disciplines, a separate initiative be started.

The sustainability of any academic programme and its viability would depend on better and comprehensive integration of the interdisciplinary aspects of such a programme. It is also essential that research should focus on new emerging areas, which can respond to the varying societal environmental concerns. Faculty members drawn from the current EEM program, and Departments such as Chemistry, Chemical Engineering, Civil Engineering, Physics, Biological Sciences and Bio-

Engineering, Mechanical Engineering etc. can provide the best combination to initiate a world class teaching and research academic program in Environmental Science and Environmental Engineering, once state of the art facilities are created.

It is proposed to initiate a new multidisciplinary facility for Environmental Science and Environmental Engineering at IIT Kanpur, with a focus on the following areas:

Green Technologies

Assessment, monitoring and modeling of environmental quality

Pollution control and remediation

Health risk assessments due to modern technologies and products

Ecological modeling,

Atmospheric Sciences – monsoon dynamics, global warming, ozone depletion)

Land reclamation

Water Resources – groundwater as well as surface water

Environmental Geosciences – Earth systems

Environmental Chemistry

To attain these objectives, a comprehensive infrastructure facility including state-of-the-art laboratory will be required. The equipment proposed to be purchased will also be utilized for the on-going research activities in other Departments of the Institute.

National Programme on Earthquake Engineering Education

IIT Kanpur earnestly believes that every Institute of National Importance has an obligation to render necessary service to the country in a crisis. Our country is prone to large earthquakes, and we need to contain the risks this involves. A trained manpower development programme for earthquake risk mitigation, known as NPEEE (National Programme on Earthquake Engineering Education), has been instituted by the Government of India. IIT Kanpur is the nodal agency for the entire gamut of NPEEE activities. The enthusiastic faculty members of the Institute have made enormous contribution in the Earthquake Engineering Education in the country. Their work in the Andaman Islands during the Tsunami calamity deserves deep appreciation.

Outreach and National Program on Technology Enhanced Learning

Meaningful growth of an Institution depends on the kind of commitment it has made to the society at large. Benefits of academic excellence cannot remain restricted to the boundaries of the academic wall. In an electronic age that has seen the walls

razed down across states and countries, an institute like IIT Kanpur has a supreme role in providing leadership that addresses societal concerns. As part of our social responsibility, we want to share our expertise with fellow academic institutions across the country and abroad. Towards this goal, we have initiated an Outreach Education Program. Under this scheme, using the VSAT transmission technology, we are providing lecture courses in the area of engineering and biological sciences to the college and university students in the State of Chhattisgarh. IIT Kanpur is promise bound to transmit some advanced courses to the students of newly founded Pandit Dwarka Prasad Mishra Indian Institute of Information Technology, Design and Management (PDPMIITDM), Jabalpur. IIT Kanpur is also participating in a new project, known as Indo-French Cyber University This will foster international collaboration in the areas of emerging technologies. The program will include transmission of courses between IIT-Kanpur and the Université Pierre et Marie Curie (Paris). The courses will be taught in English to the advanced Master's students in both countries by the French and Indian professors.

IIT Kanpur is also participating in the National Program on Technology Enhanced Learning (NPTEL) sponsored by the Ministry of Human Resource Development. Knowledge grows faster when shared. The NPTEL (National Program on Technology Enhanced Learning) is an initiative of the MHRD to promulgate quality education among the Engineering Colleges of the country through the Video and Web-based learning material in some of the popular disciplines. In particular, MHRD wants to monitor the standard of Engineering Education in many colleges where well-trained faculty members are not available in many subjects. The task is bivalent in nature. On one hand, the standards of the colleges are to be uplifted, while on the other hand the courses have to be acceptable to the end users. Seven IITs and IISc Bangalore are the major players in this endeavor. The courses prepared at IIT Kanpur, are being transmitted through the educational TV Channel, Eklavya on regular basis. These courses have earned appreciation form a wide range of learners.

IIT Kanpur has been identified as one of the nodal agencies under the National Program on Nanosciences and Nanotechnology to establish a Unit/Centre for Nanosciences in the Northern region of India. Budget for this Unit/Centre is approximately Rs.11.3 crores and the purpose is to create a state-of-the-art facility for preparation and characterization of nanomaterials that will enable researchers to undertake various nano-related projects and also attract participation from industry.

Noted Journalist and Rajya Sabha MP Dr. Arun Shourie has donated Rs 11 crores from his MPLAD funds for establishment of Environmental Sciences & Engineering Department at IIT Kanpur. A separate green building will be constructed using various energy conservation, natural lighting and cooling measures. The new department will focus on research related to different facets of local and global environmental problems.

Details of some of the major projects sanctioned last year are as follows:

NATIONAL PROJECTS

“Technology Mission on Rail Safety ” initiated by the Ministry of Railways, Govt. of India in collaboration with Ministry of Human Resource Development and a consortium comprising of (i) academic and research institutions (ii) railways organizations and (iii) industry with IIT Kanpur as the nodal agency. Technology development in the areas of traction and rolling stock, tracks and bridges, signals and communications and fog vision instrumentation have been identified as the mission programs.

“A Portable Model of Primary Healthcare Delivery” funded by Media Lab Asia has the following components:

Sehat Saathi: This is prototype software for acquiring patient data and real-time doctor patient communication to enable diagnosis and treatment. Thus all the patient data, details of clinical tests, diagnosis and treatment go into the database and are capable of being retrieved (the retrieval system has not been developed).

Package of Diagnostic devices and Processes: A package of devices/processes has been identified as being required for the purpose and is a mix of both digital and conventional methods. The digital devices come with their own software for display of data. They do not need any additional software to be developed for this purpose.

Preventive Health and Health Promotion: Patient education, information on health and Disease, Care of chronic cases, pain management, Health screening, tele-counseling etc. form an intrinsic component of the system. Many multi-media information films have been developed.

Deployment: It has become essential to train a local person, who has a commitment to the area and its people. Accordingly, a portable model has been developed which is capable of being operated by such a person.

“Development of Independent Component Analysis Based Blind Source Separation Algorithms for Audio/Image Separations” funded by Ministry of Communications and Information Technology. In most of the real-world situations, audio and image signals are embedded in noise and are sometimes even mixed. These mixtures can be of images/audio signals and noise. The main aim of the Project is to develop new neuron model based Blind-Source-Separation (BSS) algorithms which are able to separate the audio and image mixtures.

“Ultrafast Pulse Shaping Approaches to Coherent Control of Molecular Systems for achieving quantum computation” sponsored by Department of Science and Technology under the Swarnajayanti fellowship scheme. This project aims to develop the optical analogue of NMR spectroscopic schemes to demonstrate logic at molecular levels through their control. INTERNATIONAL PROJECT

Swedish International Development Cooperation Agency has sponsored a project on treatment of domestic wastewater in India. The objective of the project is to review existing domestic wastewater treatment practices and case studies in domestic wastewater treatment through UASB process in India.

Patents Granted to IIT Kanpur Faculty during the financial year 2004-2005

A Magneto-Resistive CrO₂ Polymer Composite Blend (US 6793841); Microwave Filter Having a Temperature Compensating Element (US 6734766); Process for the Recovery of Inorganic Compounds from Kraft Liquor (189310); A Current Prediction Device for Parallel Resonant DC Link Motors (189403); A Resonant DC Link Inverter Device for Power Supply and AC Motor Drive (189404); A Process of

Depositing Polycrystalline Carbon Film Resembling a Diamond Film on Stainless Steel Substrate (191198).

Major Multi-disciplinary Facilities Added During the Financial Year 2004-2005 are:

1. Affymetrix GeneChip System

The GeneChip® Instrument System is a fully integrated platform for conducting expression analysis studies using GeneChip Probe Arrays. The system consists of a GeneChip® Scanner 3000, a Fluidics Station 450, a Hybridization Oven 640 and a powerful computer workstation loaded with GeneChip® Operating Software (GCOS). *Drosophila* genome version 2.0 chips are used for experiments. These oligonucleotide spotted GeneChips allow the monitoring of the expression levels of more than 16,000 *Drosophila* genes at the same time.

The GeneChip Scanner 3000 incorporates advanced design improvements with speed, superior performance, saving of space and lower scanner-to-scanner variation to dramatically improve throughput and efficiency in genetic analysis. It provides more accurate gridding and more consistent scanner-to-scanner biological performance, improving data integrity and data sharing between researchers. Combined with the GeneChip Autoloader, the GeneChip Scanner 3000 also provides sample tracking, temperature control and walk away freedom during scanning. The scanner is also designed to accommodate future advancements in GeneChip technology. The GCOS software allows full control of instrumentation as well as basic analysis and filtering of data.

2. Automated DNA Sequencing Facility

The ultimate goal of genome research is to map all the genes in the DNA sequence for various model organisms and to develop tools for using this information in the study of human biology and medicine. A high throughput DNA sequencer (CEQ 8000 from Beckman Coulter) has been acquired, which is a fully automated genetic analysis system. This system automatically fills the capillary array with a patented linear polyacrylamide (LPA) gel, denatures and loads the sample, applies the voltage program, and analyzes the data. Software tools help in rapidly reviewing data quality and even customize automated data assessment.

This system is equipped to perform sequence run for 96 samples in 24 hours. The following analyses can be done using this system.

- De Novo DNA Sequencing
- Heterozygote Detection
- Confirmatory Sequencing
- Mutation Analysis
- Allele Identification
- SNP Scoring
- Microsatellite Instability
- AFLP Fingerprinting
- Gene Expression

The CEQ800 system uses standard chain termination sequencing methodology like the radio-active method but employs new detection and sampling technologies. The labels attached to the ddNTPs are different fluorophores. Therefore it is possible to carry out the four sequencing reactions - for A, C, G and T - in a single tube and to load all four families of molecules into just one capillary, as the fluorescent detector can discriminate between the different labels and hence determine if each band represents an A, C, G or T. The sequence can be read directly as the bands pass in front of the detector and sent straight to a computer for analyses. These data files can be opened in several third party software packages for further analyses.

3. Malvern's Spraytec Particle Analyzer

Malvern's Spraytec combines the proven technique of laser diffraction particle characterization with high concentration data inversion routines for the analysis of sprays with rapidly changing concentrations. Spraytec is ideally suited for the study of fuel sprays and aerosols.

Laser beam passing through the spray gets scattered and the scattered light is collected over a series of photo-detectors (receiver). The amount of scattered light on each of the detector is measured and particle size distribution is obtained on this basis. Using the principle of Mie scattering theory and a diode laser to produce a beam of 670 nm wavelength, the instrument has a measuring rate of 2500 Hz (max.) and obscuration level of upto 95%. The instrument allows study of transient phenomenon and very dense sprays and can measure particle sizes upto 0.5 μ m to 1000 μ m. The system has been installed in the propulsion laboratory of the Aerospace Engineering department for development, characterization and testing of fuel atomizers. This facility is being used by Mechanical, Chemical and BSBE departments.

4. AFM/STM Facility

Atomic force microscopy (AFM) /Scanning Tunneling Microscopy (STM) has revolutionized the field of interfacial surface science by enabling direct, high-resolution visualization of surface morphology of variety of surfaces in air, in various solutions and gas environments. Besides topography, AFM imaging is also capable of distinguishing areas that have different chemical phases, physical properties like elasticity, stiffness, hardness, and can image magnetic domains and conductivity in nanoscale. AFM provides a quick way to obtain high-resolution images with little or no sample preparation. With the advent of the new technologies simplifying the preparation and handling of numerous sample types, the use of this powerful technique is becoming widespread in materials and biological research.

AFM/STM facility at IIT Kanpur was established in January 2002 and is equipped with Scanning Probe Microscope (SPM) system made by Molecular Imaging, Inc (USA). Contact mode, Acoustic AC (AAC) mode, Magnetic AC (MAC) mode, Pulse Force Mode (PFM) and Magnetic Force Microscopy (MFM) are the available modes.

The modular design of the microscope, scanner and environmental control equipment, motivated by the need for flexible in-fluid work and in controlled atmosphere, makes this facility very versatile. It has a wide range of both AFM and STM capabilities for examining sample surfaces and to conduct force spectroscopy and tunneling spectroscopy experiments of conducting or semi conducting surfaces with atomic resolution. AFM is used in structural and molecular biology, materials science research and molecular interactions studies through force spectroscopy.

5. SQUID Laboratory

The Superconducting Quantum Interference Device (SQUID) based Magnetic Properties Measurement System (MPMS) is a highly integrated instrument system specified for experimental and materials characterization tasks that require highest detection sensitivity over a broad temperature range (1.7K-350K) and in applied magnetic fields as high as 5 tesla (50,000 Gauss). In fact these devices are powerful enough to measure the small magnetic fields around the human heart and brain. The SQUID laboratory has a complementary technique to characterize the electron transport properties of materials. It is called the Physical Properties Measurements System (PPMS). This integrated facility with such low-temperature and high-field capability is the first of its kind in India.

6. CEM Voyager Stopflow System

The system along with discover microwave reaction module provides specific designs that satisfies the need to scale up organic reactions with energy in a safe, controlled and consistent method. It is made fit to do reactions with liquid, slurries and solid reagents, scaling up the reaction from 10 ml to 80 ml with same parameters and same yield. The additional feature is the Investigator System, a Raman spectroscopy system, featuring a compact 785nm laser diode and a CCD detector to offer the smallest and most cost-effective Raman system. This technique allows the analytical interrogation of reactions through in situ real time analysis with microwave-enhanced chemistry. Reaction conditions can be controlled and adjusted based on product formation, starting material depletion, reactant uptake, or other critical parameters.

7. Pulsed Electron Deposition Unit for Thin Film Nanostructures

Pulsed Electron Deposition technique allows penetration of a high power electron beam approximately 1m into the target material (ablation) and can be computer controlled for maximum reproducibility. This technique provides a unique platform for depositing thin films of complex materials on a variety of technologically important substrates, with a unique strength of extending the range of materials including multi component metal oxides, complex alloys and novel polymers. Non-equilibrium extraction of target material (ablation) facilitates stoichiometric deposition.

8. High Performance Thin Layer Chromatography (HPTLC)

The technique is used for separation and quantification of non-volatile organic compounds. Movement of organic compounds with any solvent under the capillary action on a stationary plate coated with porous materials (Silica Gel/ RP/ Cellulose etc.) depends on two factors:

- a) Polarity of Coating material (Stationary Phase), Solvent system (Mobile Phase) and the organic compound (Sample).
- b) Molecular weight of the compound (Heavier compounds will rise less)

Molecules of different compounds rise to different levels on a stationary plate under the capillary action with mobile phase. Each molecule of a compound has same affinity to mobile / stationary phase, and hence, all molecules of a specific compound rise to same level on the plate. As a result, such development separates all the compounds in layers and they appear at different heights on the plate. The

compounds separated in different layers can further be quantified by absorbance study under UV-visible spectrum.

DOCUMENT DELIVERY SERVICES & EXTERNAL USER MEMBERSHIP

Inter-Library Loan (ILL) services are extended free to sister IITs, IISc, TIFR, BARC and other technical institutions & universities. During 2004-2005, ILL (OUT) requests for 347 articles/chapters were received and processed from the host of Institutions, whereas ILL (IN) requests for 68 articles/chapters were made to other libraries. Complimentary copies of CAS services, departmental work etc. accounted for 98,817 xerox copies.

Individual and institutional membership of the Library was made available to 1402 external users.

ON-LINE CATALOGUES UNDER PROCESS

An on-line catalogue to back volumes of journals for creating a retrospective data file is under way. Besides, a database for CD-ROMs, received in the Library as accompanying material to books, journals, archival volumes of on-line databases, conference proceedings, books only on CD-ROM etc. using WINISIS software is under process.

LIBRARY AUTOMATION

The User Services module of the IIT Kanpur Library Automation System (iitKLAS) has been re-engineered and available on Web-based platform. The Catalogue search, current contents, journal subscription queries can be accessed through web. The new version of circulation Module, in Java/Jsp, is in the process of development. Digital library initiatives help provide accessibility to the on-line journals from various publishers/Vendors, including INDEST, the MHRD Consortia. Our Library is also accessible to out side community through web: <http://library@iitk.ac.in/> but with limited services.

COMPUTER CENTER

Computer Center at IIT Kanpur is a central facility that caters to the computing needs of the faculty members and the students for their research and teaching. It also manages Internet and campus LAN infrastructure. It provides several popular applications like email and web access. It currently supports more than 5000 users.

For high performance computing, Computer Center has acquired a large 96-node cluster from SUN. Each node is a dual-Opteron 2.4 GHz CPU with 4GB RAM, and 36 GB disk. It runs Linux on all nodes and there is master node, which runs SUN Grid Engine software to manage access to the cluster.

Computer Center has about 200 PCs running Linux or Window 2000 Operating System. All the computers in the Center are connected through a 100 Mbps switched network. About half the PCs are based on Intel Pentium 4 2.0 GHz processor with 256MB RAM, and the other half are based on Intel Pentium 4 with Hyper threading, 3.4GHz processor with 1GB RAM.

Computer Center supports an institute-wide 6000 points, 100 Mbps, fiber optic network that connects all academic departments, central library, student hostels, R&D hostel, and visitors' hostel, lecture halls and all administrative sections. This is one of the largest campus networks in an academic institute. Connectivity to faculty residences is provided through ADSL. For other residential users, both inside and outside the campus, dialup service is provided. For Internet access, we have a leased line of 34Mbps capacity from VSNL, and an additional 2Mbps from ERNET. IIT Kanpur is one of the best connected campuses in India. We also provide wireless access in several important buildings on campus.

Computer Center also has a specialized Virtual Reality Lab, for researchers in visualization and other similar needs. This includes an excellent 3-D projection facility, with a backend graphics engine, and two SGI advanced workstations for development work.

Computer Center provides email and web access facilities to all its users. Faculty members have access to all CC facilities for the life time.

Computer Center operates 24 hours a day, 365 days an year. It has a power back up through a 270 KVA UPS and a 320 KVA generator set. Air conditioning is provided by the central air conditioning plant and split air conditioners.

Facilities to Students

RESIDENTIAL ACCOMMODATION FOR STUDENTS

Hall of Residence:

IIT Kanpur is a residential Institute and thus requires that all students registered for a degree programme in the Institute reside in the Campus itself. Therefore, all students except (i) married students who are allotted alternative accommodation in single bed room apartments (SBRA) and (ii) students who are wards of campus residents are provided room accommodation in the Halls of Residences with mess and other facilities. Students, who are wards of campus residents, as a special case, are permitted to stay with their parents on the campus.

The Institute has eight Halls of Residence for boys, namely Hall I to Hall VIII, and one for girls (GH) with total capacities of 3433 and 350 for boys and girls respectively. In addition, there is accommodation for 60 students in single bedroom apartments (SBRA). The construction of hall of Residence No.9 is in planning stage.

The Halls have single and double-seated rooms. Presently, most of the senior undergraduate and all post graduate students are given single-seated rooms, while most of first and second year and some third year B. Tech. and M. Sc., (Integrated) students and Ist year M. Sc. (2-Year) are living in double seated rooms. Each Hall has a mess of which every hall resident is a member. The Halls of Residence also have a well subscribed reading room, TV room, TT rooms, badminton and volley ball courts, canteen, library (with the books on general topics) and several hobby clubs. The affairs of these amenities in each Hall are managed by (i) the respective committee of students for the amenities and (ii) a central Hall Executive Committee (HEC) under the overall guidance and supervision of three wardens (two for Hall-VI). The overall management of the Halls of residence is through the central Hall Management Council (HMC). The Council of Wardens (COW) looks after the affairs of mess workers.

In addition to students, staff working in various research projects of the Institute are also provided accommodation in the halls depending upon the availability of the rooms. The boarding and lodging arrangements for the participants of conferences and short-term courses are also made in the Halls of Residence.

Single Bed Room Apartments (SBRAs)

Depending on the availability, the accommodation in single bedroom apartments (SBRA) is provided to married students. In exceptional cases bachelors, on specific medical grounds, may also be provided SBRA accommodation. A Married Students Welfare Committee (MSWC) manages the affairs of SBRAs under the supervision of the Warden-in-Charge.

FINANCIAL ASSISTANCE TO STUDENTS

All possible efforts are made by the Institute to render financial assistance (i) in the form of scholarships and (ii) short-term loans to needy and deserving students during their stay at the Institute. Short-term loans are given to some students, depending on the requirement of the case, out of the Students' Benefit Fund (SBF) so that their minor financial emergencies are overcome. The details of the financial assistance offered to the students at the Institute are given below:

SPECIAL ASSISTANCE TO SC/ST STUDENTS

Rules for admission to undergraduate programme through JEE are relaxed for the SC/ST categories of students. 15% of seats are reserved for the Scheduled Caste (SC) and 7.5% for the Scheduled Tribes (ST) students. A separate merit list is drawn for those SC/ST students, who appear for the Joint Entrance Examination. Cut-off point for calling them for the Counseling and thereafter for the offer of admission is based on the relaxed criterion.

In addition, SC/ST students are also selected from among the list of students who do not qualify for the admission for a one-year preparatory course scheme. 36 candidates belonging to the SC/ST category were granted admission for the one-year preparatory course out of which 22 took admission at the Institute during 2004-2005. All the SC/ST category students get tuition freeships irrespective of their parent's income. Concession of free messing (basic menu only) plus pocket allowance of Rs.125/- p.m. and room rent exemption are admissible to these SC/ST category students whose parents income does not exceed Rs. 1,00,000/- p. a., in the previous financial year.

One fifth of the Merit-cum-Means (MCM) scholarships are reserved for the SC/ST category of students. ACTIVITIES OF STUDENTS GYMKHANA

As mentioned above, academic activities are only one facet of student's life at IIT Kanpur. Our students actively participate in various extra and co-curricular activities focused towards the holistic development of their mind and body. The year 2004-2005 also saw a very active calendar in the form of various games and cultural events.

Games and Sports Activities at IIT Kanpur

IIT Kanpur has a very vibrant sports atmosphere. There are sports events all over the year at both, the hostel level and at the Institute level. The Games and Sports Council conducts all sports activities at the Institute level and actively helps in the conduction of the events in the various hostels. There are dedicated institute teams for each sport in addition to clubs that augment the sports culture in their own way.

IIT Kanpur boasts about some of the very best facilities of any Institute in the country. There is a full grass cricket ground, athletics track, two volleyball courts, basketball courts, an indoor setup for Badminton, TT and weightlifting and fully Floodlit Hockey and Football grounds. In addition to these great playgrounds, there is also an Olympic size swimming pool, replete with a diving board set-up, five regularly maintained tennis grounds, two concrete and three clay courts and an indoor gymnasium. The maintenance and addition of new facilities is entrusted to the Physical Education Section, a separate department devoted to sports activities, which boasts some very highly qualified coaches.

The Games and Sports Council comprises of the teams for various sports and a clubs related to sports. The past one-year has been very successful for the Council. The Institute teams practice regularly in preparation for the Inter IIT Sports Meet, conducted every year in December. They play practice matches against local clubs, both at home and away, and other teams that come over to IIT Kanpur during **Udghosh**, The IIT Kanpur sports festival. Some of our teams have developed very well in the past one-year. The football team hasn't lost a single match at home in the past one year against in all competition.

In addition to the regular activities of the teams, the council conducts two sports festivals, **Udghosh** and **Josh**. Udghosh, the IIT Kanpur Sports festival is a great competitive experience where colleges from all over the country come and participate in a three-day event. Udghosh attracted over 900 participants from colleges all over the country. The home teams performed extremely well at Udghosh, with Gold medals in six different sports. It was a huge sporting success with record number of participant. Josh is the Intra IIT Kanpur sports festival, where all the events are conducted at night. It was started the year before, and was an even bigger success this year. Over sixty teams registered in all the events with night Phatta registering over a hundred teams, and an estimated 2500 students took part in one event or the other. Such participation level from the predominantly academic minded students of IIT Kanpur was a big surprise. In addition to these mega events, the hostels also have their own sports festival. The two undergraduate hostels, Hall 2 and Hall 3, conduct **Unmad** and **Olympus** respectively while Hall 4 continues its love affair with Volleyball with **Smash**.

There are four Clubs under the Sports Council viz. the **Adventure Sports Club**, the **Tae-Kwon-do Club**, the **Bridge club** and the **Nature Club**. The Adventure sports club is one of the most active clubs in the campus. It undertakes treks and cycling expeditions to exotic places of great natural beauty. In the past one year it successfully undertook two treks and two cycling expeditions. In addition to these activities it also conducts activities such as river rafting and wall climbing. The members of each expedition are selected after a rigorous conditioning program.

The Tae-Kwon-do club was very active and successful in the past one year. The club enrolls students at nominal fees and imparts Tae-Kwon-do training. The club successfully conducted many belt promotion tests in the last one year. The Club was very successful at the district belt tests and now boasts a few black belts in its ranks. The coaching is imparted by a very highly qualified coach, who himself is a black belt holder. The club has also initiated the process to get Tae-Kwon-do recognized as a regular sport in the Inter IIT sports meet.

The Bridge Club was started this year. It was started to cater to the interests of many students who are interested in this card game. It has been very active since its inception, and has been successful in conducting workshops and holding Bridge competitions. The Nature Club caters to the interests of a few nature lovers. The club holds workshops and visits wildlife sanctuaries. It labels the trees inside the campus and gives its say in all environment related issues inside the Institute.

The last one-year has been a very productive year. A much larger number of individuals are participating in sports activities than a year before, both from the junior and senior batches. This spurt in sports activities will surely go a long way to improve our performance at the Inter IIT meet and also help maintain the vibrant sports culture of IIT Kanpur.

INTER IIT SPORTS MEET'04

Inter IIT Sports Meet was held in IIT Madras in December 13th – 19th, 2004. The performance by our teams didn't live up to our expectations. However, to put things into perspective, a comparison with the last years results, which is acknowledged to be much better, shows that we made it to the semifinals in three sports in Men category (compared to 4 last year) and one in Women category (none). We had to drop many senior players due to injuries, departmental tours and last minute seminar call-ups, etc. The constructive aspect to come out of this meet was that we had over 40 first year students in the contingent of 120, which is a very good base to improve on for next year.

We won Silver medal in Football and Bronze medal in Badminton (Women). In individual events Mr. Sandeep Yedlapalli won gold medal in Shot-put Throw and Mr. Rajeev Kapoor won Bronze medals in 1500m and 5000m races. Volleyball and Badminton (Men) missed the medals but got fourth position.

We got a dismal 6th position but we plan to take effective measures to avoid situations due to which our key players had to back out and to build on fresh talent of the first yearites.

UDGHOSH'04

Udghosh 2004, the Inter Collegiate Sports festival, organized by the Games and Sports Council, Students Gymkhana, IIT Kanpur was held from September 30th to October 3rd, 2004. The total number of participants at Udghosh 2004 was a record 950, nearly 600 more than the number of participants at Udghosh 2003 from different Engineering Institutes from all over India.

The colleges participated were MNNIT Allahabad, HBTI Kanpur, St. Xaviers Kolkata, GSITS Indore, NIT Jalandhar, IIIT Noida, Integral College Lucknow, Jalpaiguri govt. Engg. College, Allahabad Agriculture Institute Deemed University, PEC Chandigarh, Govt. college of architecture Lucknow, Jaipuria Institute of Management Lucknow, Punjab Engineering College Chandigarh, BIET Jhansi,

Jabalpur Engineering College Jabalpur, BRANIT Jalandhar, MERI Kolkata, Modi College, IT BHU, Kamla Nehru Institute of Technology Sultanpur and IIT Kanpur.

Our teams performed very well in this Sports' meet. We won Gold Medals in Volleyball, Basketball (Men), Football, Badminton (Women), Table Tennis (Men) and Cricket. We won silver medal in Badminton (Men). We won bronze medal in Lawn Tennis.

In individual games Mr. Rajeev Kapoor won silver medal in 5000m race and bronze medals in 1500m & 800m race.

The overall performance of our teams was good and upto our expectations. This event prepared an effective platform for the upcoming Inter IIT Sports' Meet '04.

CULTURAL COUNCIL'S ACTIVITIES

Cultural Council aims at holistic development of students of the Institute. It organizes activities in several fields such as fine arts, music, SPIC MACAY, drama, dance, appreciation of Hindi and English literature, spiritual and cultural values and action, and quizzes. During 2004-05 Cultural Council organized several such activities through students clubs devoted to each of them. The activities of Cultural Council start with Freshers Night and continue through out the year. Each club organized four-five events. Among them Galaxy, the inter hall cultural competition is very popular among students. It was organized with typical fun and fare. Some other successful events organized by the Cultural Council were: Musical Extravaganza, Dramatics Workshop, and Guitar classes which ran throughout the year.

Every Friday Vivekanand Samiti held a study circle to discuss books written by great thinkers. A discussion on Bhagwat Gita was carried out on every Saturday. Vivekanand Samiti also conducted semester long courses in Yoga with the help of an outside expert. Lectures and workshops on meditation and book exhibitions were held at regular intervals. Among other activities the Samiti mobilized students to realize their social responsibility by having organized medical camps, old clothes and books distribution camps. It also worked in association with Shiksha Sopan and Prayas which run schools in nearby villages. The Samiti maintains a library of over 300 books on spiritual matters.

One of the new features of the activities of the Cultural Council this year was that it joined hands with the Centre for Creative Writing and Publication and organized creative writing competition, film workshop by Narendra Ketkar, and lectures by well known writers such as Chetan Bhagat and Sandipan Deb.

However, the most important task of the Cultural Council was to organize Antaragni, the annual cultural festival of IIT Kanpur. Antaragni 2004 was organized from 28 October to 31 October 2004. More than 1000 participants from 45 colleges of India representing different types of colleges, institutions and universities participated in it. Apart from debates, competitions, professional nights, Antaragni 2004 added a two-day event **India Haat** aiming at the cultural union of different states of India. Representatives from Mizorum, Assam, Manipur, Uttar Pradesh and Madhya Pradesh took part in this and presented folk art from the respective regions. At the organizational level a new institution of **Mid Night Meeting** was introduced; in the mid night each day the team leaders and the organizing team met to discuss problems and complaints of participants and find solutions. Through this “important announcements” were conveyed to the participants. During 2004 the Cultural Council made a special effort to convert the event from the purely students’ event to campus event in which not only students but also other campus residents could participate and develop a feeling of oneness. This promotes integration between different groups on the campus and ultimately helps the students in developing a sense of integration, pride, culture and leadership.

Techkriti 2005

Techkriti, the Annual Science and Technology Festival of IIT Kanpur, was held from 24th to 27th February 2005. Techkriti '05 celebrated the spirit of creativity, innovation and technical expertise in its full vigor. Nearly 1000 participants from colleges all across India visited IIT Kanpur to participate in the festival. This figure was the largest for any festival ever held in IIT Kanpur. In addition to competitive events, workshops, lectures and demonstrations were held to give a hand-on experience with the latest in technology. Following sections give a detailed review of Techkriti '05.

Events: New events, Gearloose, i-Quiz and Techcetera were introduced in Techkriti'05. An event restructuring was done and smaller events were clubbed together into a single large event, which helped in marketing and organization. Traditional and popular events like Endeavor, Robogames, ECDC, Eureka, and Software Corner were scaled up with increased scope of competition, innovative organization and increased prize money. All the events attracted huge enthusiastic

participation. International Online Programming Contest (IOPC) deserves special mention, as it saw huge participation from all across the globe, giving Techkriti a truly international color. The Quiz organized by the famous Quiz Master, Barry O'Brian attracted huge crowds. This Quiz was largely responsible for the revitalization of quizzing culture in IIT Kanpur. The main attraction of the festival, however, was Techtalk. Dr. Heng Phon Too gave a lecture on Bio-entrepreneurship from National University of Singapore, Singapore. Hacking workshop by eminent hacking specialist Sachin Deodhar was a big crowd puller in the festival. A RFID, Smart Cards, Embedded Systems Workshop was organized, which included lectures from Dr. Rajat Moona (IIT Kanpur), and Mr. Aditya Razdan, Vice-President, Infotek Software and Systems Pvt. Ltd. For the first time in IIT Kanpur, a design lecture-cum-workshop was organized by Dilip Chhabria. Eminent speaker Shiv Khera delivered his motivational talk.

Participation: Techkriti '05 witnessed huge participation from colleges all across the country with the number of participants scaling up to 1000. A step was taken towards automation with the development of Web based Event Management System. The software developed can be used in future too.

Umang 2005

Umang 2005, the annual film festival of the Students' Film Society, Students' Gymkhana, was held from January 7 – 15, 2005. The 9-day festiaval started on a Friday and continued on to the next weekend's Saturday (Sunday could not be utilized because of the ongoing Gymkhana elections – Sunday the 16th was the designated polling day) and a total of 35 films were screened as a part of the festival.

The films spanned all possible genres and themes as were feasible given the timeframe, and were very well appreciated by the student as well as faculty communities.

The biggest change we made for Umang 2005 was the length of the festival and the number of films screened – 9 days and 35 films for a complete film festival was unheard of till this year. However, a complete film festival is what we got, in all senses of the phrase.

The films screened spanned Indian films (in Hindi, English and regional languages), western films (from Europe as well as Hollywood), animated films (Hollywood and Japanese) and Indian documentary films that focused on various social concerns.

Also, the students' community of IIT Kanpur also participated in making their films as a part of Umang (*Director's Cut*), and selected films from here were also screened. The focus was not only on quantity, but also definitely on quality.

STUDENTS' PLACEMENT

The Students' Placement Office continues to play a vital role in assisting the students in career planning and employment. It was actively engaged in disseminating information of job opportunities and prospects with the employers in both the Public and Private Sectors. Students Placement Office has been arranging campus interviews and organizing Paid Summer Internships for students.

Invitation letters were sent to about 700 Industrial Organizations, both in Public and Private Sectors, for visiting our campus for recruitment of students. About 115 organizations participated in the On-Campus-Recruitment-Programme during the academic year 2004-05 either by sending their top ranking executives to the campus or by calling the students to their Head Office for the interviews.

This year some organizations like Sybase, Intel, Nextag, Kanbat Software, Fair Isaac, Appulse Software, Induslogic India, Pricewater Cooper, Contata, Solidcore, Goldman Sachs, LLSI Logic, Hero Honda, Infineon Technologies, ITTC Japan, HCL Comnet, Power Finance, Systat, Nikson, Redpine Signal, Yamaha Motors, Career Network, Kritikal, Airvana, Minda Industries, MG Mobiles, Cordys and Mellon Financial have recruited for the first time through the On-Campus-Recruitment-Program. The employment scenario during this year has improved to a great extent in comparison with the last two years.

A total number of 548 offers of appointments have been made till 14.07.2005 to the students by various employers through Students Placement Office. A total of 86.98% of the students registered with SPO have received job offers so far. The placement for our B.Tech. students has crossed 90.41% mark this year where as for M.Tech. students, it was about 84.02%.

With the objective of close monitoring and uniform opportunity to all the students registered for the placement, the policy introduced was one student on job. However, a new policy was initiated, Job with appropriate back ground, especially for those who got an offer in haste initially.

With regard to the IN-Plant-Training Programme during summer vacation for the prefinal year students, the Students Placement Office offered assistance to students

of all the engineering departments. About 25 paid summer training seats were offered to our students. Statement showing the number of students registered for availing placement assistance and those who received job offers through Students Placement Office are given in Tables I to V.

About five organizations are in the process to schedule their placement process in the month of July 2005.

COUNSELLING SERVICE

Counselling Service is an organization made up of student volunteers, faculty members and staff who offer help and guidance to students on the academic, emotional and financial fronts. During the session April 2004-March 2005, the Counselling Service had two UG coordinators, one PG Coordinator, assisted by 5 UG assistant coordinators and 3 PG assistant coordinators and a team of nearly 73 UG student guides and 23 PG student guides.

Like every year, the activities of the Counselling Service started during the summer with the preparation for welcoming the new batch of students. A well planned brochure including letters from the Head, Counselling service, Student Coordinators, President, Students' Gymkhana informing them about the practical details of life at IIT Kanpur and other useful information like the bus schedule, academic calendar and the map of the Institute etc. were sent to all the new students before their arrival on the campus. A workshop was organized for the student guides to sensitize them to the problems that the new students assigned to them might face. A group of 5-6 new students was associated with a student guide and a faculty counsellor who facilitated their smooth settlement in the initial stages.

A common Orientation Programme for the new UG and PG students (for 5 days) was organized for the first time during which they were shown around the campus and informed about the various facilities available to them. They were assisted in

opening up new bank accounts and were guided through all the official processes of making I-Cards, health booklets, cc logins and the final registration. The Counselling Service also organized a bank presentation where the new students got to know about the various educational loan schemes of the different participating banks. Lectures by the Head, Computer Center and the Games Counsellor were also included.

A Link structure was also formed after the commencement of the academic session in August to take care of academically deficient students. The team consisted of 22 link students and 14 link faculty members associated with every department. Regular meetings were organized to monitor their academic performance. A total of 6 meetings (3 in each semester) were held to discuss the issues related to these students. During the session 2004-05 (I), 58 students were on Academic Probation list and 54 students on Warning. 71 students came out of the list after this semester. A total of 190 students were on AP/ Warning during the 2004-05 II sessions.

Group counselling was also introduced during this year to identify the problems of the academically deficient students. 3 such sessions with different groups of students were held. Around 57 students were involved in these sessions. Many students personally met the Head, Counselling and the Counsellor regularly for guidance.

Like the previous year, this year too certain students were recommended the slow paced programme, on the basis of their performance up to the first mid semester examination. Meetings were held with these students to suggest semester wise course plans according to their departments. Two meetings of slow pace committee (one in each semester) were held to review the slow pace policy.

To assist the students having problems in English conversation and comprehension, the Counselling Service organized conversational classes at nominal rates.

A Student Faculty Open House Discussion on the Academic Issues concerning the students was organized in the 2004-05 (I) Session. The forum witnessed active participation from both student and faculty communities and it was realized that more of such sessions should be organized to enhance student-faculty interaction and discussion of academic concerns of mutual interest.

A thesis-writing workshop was conducted for the PG students. A total of 70 students attended this workshop.

Like every year, Counselling Service appointed a professional psychiatrist who visited the campus on alternate Saturdays to resolve various psychological problems of the students and an assistant counsellor to support the various activities of the service. A total of 80 students consulted the psychiatrist. In addition to this, psychiatric help was also available outside the campus in cases of emergency through the Counselling service. A proactive initiative by the assistant counsellor motivated students to come forth for guidance in personal and emotional issues. A total of 60 students met her during the period from August 2004- April 2005.

On the financial front, students were provided assistance through SBF scholarships. Around 50 students could avail this facility. Loans were provided to students facing acute financial problems.

In addition to this, volunteers from Counselling Service helped make arrangements for the PM's visit to the Institute.

In February, the new coordinators both for UG and PG were selected and interviews were held for selecting the new assistant coordinators and student guides for the next session. New faculty counsellors were also appointed as per the choice of the student guides. The new team took charge after the handing over ceremony in April, where the old team was presented badges by the Director.

It stocks some items of consumable nature like stationery, hardware, and liveries etc. The Central store has two units, namely Purchase unit and Receipt/Issue unit. This section is headed by a professionally competent Deputy Registrar (Materials) who is assisted by a professionally competent team of 22 persons.

The store also handles disposal of unusable and scrap materials. Clearance of parcels and dispatch of rejected materials to both local and foreign firms for repairs/replacements is also done by this section. It assists the department in areas like transportation, procurements of furniture, etc.

8. Two of the faculty members have received the prestigious "**Wellcome Trust International Senior Research Fellowship award**" from United Kingdom: **Balaji Prakash**: "Structural Studies on GTPases and EDG Family G Protein-Coupled Receptor", July 2004 – June 2009, Approx. Rs 266 lakhs. GTPases are Guanosine Tri-Phosphate (GTP) binding proteins that control multiple biochemical pathways in the cell. Hydrolysis of GTP by GTPases requires the crucial role of a highly conserved amino acid Glutamine. Mutation of this Glutamine in one such GTPase, called Ras, leads to cancers and search for drugs is a difficult task. Since three-dimensional structure of a protein dictates its function, drugs can be designed based on this knowledge. Although a lot is now understood about Ras and its structure, little success

has come by way of drugs. The project proposed here aims to provide an alternative methodology to facilitate this goal. We wish to understand how certain atypical GTPases carry out GTP hydrolysis, despite carrying oncogenic (cancerous) mutations. These GTPases (HAS-GTPases) are atypical because the essential glutamine is substituted by a hydrophobic residue, which cannot perform the same role. Using Bioinformatics, Biochemistry and Structural biology as major methodologies, we wish to understand the novel catalytic mechanisms underlying the function of these proteins. This knowledge will provide the structural framework for anti-Ras drug design.
